## Summary

Third-year B.E. Computer Science student at BMSIT (CGPA 8.7/10), graduating May 2028. Backend-focused engineer with shipped work in multi-tenant systems, developer tooling, and testing infrastructure. Comfortable navigating ambiguous problems and owning a service from schema design through deployment and CI. Seeking the Summer 2027 Software Engineer Intern (AMTS) role.

## Education

### BMS Institute of Technology & Management

B.E. Computer Science & Engineering (AI/ML) | CGPA: 8.7/10

Bengaluru, India

Aug 2024 - May 2028

## Projects

### Multi-Tenant Ticketing Platform | Python, FastAPI, PostgreSQL, Docker 2026

- Designed a shared-schema multi-tenant data model across 9 relational tables with org\_id scoping, composite indexes on (org\_id, status) and (org\_id, assigned\_to), and cascading foreign keys for referential integrity.
- Implemented role-based access control with request-scoped tenant isolation at the query level, so cross-organization access fails by construction, not convention; added pagination, filtering, sorting, and an audit log to the REST API.
- Wrote unit and integration tests (Testcontainers Postgres) covering cross-tenant isolation and wired a GitHub Actions pipeline blocking merges on failing tests; deployed the containerized service with a managed Postgres instance.

### Relay - AI Coding Assistant | TypeScript, React

May 2026 - Present

- Built a request router over a configurable priority queue of LLM providers with automatic failover and live per-provider quota tracking.
- Designed a context-compression and handoff pipeline that transfers conversation state between providers on quota exhaustion, preserving session continuity.
- Implemented a workspace indexer and diagnostics-aware context builder using the VS Code Workspace and WorkspaceEdit APIs.

### EduRAG - Document Retrieval Service | Python, ChromaDB, Docker Jan 2025 - Present

- Built a containerized retrieval service over 500+ pages of source material with fallback handling for out-of-scope queries, returning responses in under 2 seconds.

## Experience

### KlarDataLabs

Zurich, Switzerland (Remote)

Agentic AI & LLM Engineer Intern

Aug 2026 - Present

- Working on agent orchestration and LLM tooling using the Strands Agents SDK integrated with AWS Bedrock; building and testing local development workflows, validating agent behaviour against cloud-hosted backends before deployment.

### Coding Club, BMSIT

Bengaluru, India

Treasurer & Core Member | Lead Organiser, NIRMAAN 2026

Aug 2024 - Present

- Lead Organiser for NIRMAAN 2026, a 24-hour hackathon with a **Rs. 1,00,000** prize pool, 200+ participants, sponsorship outreach to 52 companies, and a ~Rs. 3,00,000 budget.
- Manage finances for a 100+ member technical community; conduct DSA, Python, and ML workshops for batches of 30-40 students.

## Technical Skills

**Languages:** Python, SQL, JavaScript, TypeScript, C, C++ (fundamentals)

**Concepts:** OOP, Data Structures & Algorithms, Relational Database Design, REST API Design, Access Control, Complexity Analysis

**Tools & Cloud:** pytest, GitHub Actions CI, Docker, Git, PostgreSQL, AWS (Bedrock, EC2 fundamentals)

## Certifications & Coursework

CS50: Intro to CS - Harvard (2024) | Python Programming & SQL - GQT Institute (2023-2024)
